ReportFlow

Getting started

Accept your invitation first

Open the private link in your invitation email and set your own password. The link works once and expires at the exact date and time shown in that email. If it has expired, ask the person who invited you for a new invitation.

Keep your invitation link private. This QR opens the public app only; scanning it does not accept an invitation or create an account.

Scan to open the app

1 Add ReportFlow to your device

ReportFlow is a web app (PWA). Use it in your browser or install it from the website; no App Store download is needed.

iPhone / Safari: Open the app link in Safari. Tap Share (or Page Menu, then Share), choose Add to Home Screen, keep Open as Web App on if shown, then tap Add.

Android / Chrome: Open the app link in Chrome. Open More, then Install and create shortcut > Install. Some versions show Install app or Add to Home screen. Confirm the prompt.

Computer / Chrome: Choose the address-bar Install icon if available, or More > Cast, save, and share > Install page as app. You can also keep using the browser.

2 Sign in

Open ReportFlow and sign in with the email address that received your invitation and the password you just set. Installing the app does not grant access. Connect to the internet for first setup and signing in.

3 Complete your first Report

Choose New Report (Supervisors: Submit form > New Report), then an available Department template. Enter the Report Date, optional Site, answers and any required photos or signatures. Review your entries and submit. Check My Reports to confirm it is submitted; a queued Report is still waiting to sync.

4 Keep your work safe

Use a connection whenever possible. Offline availability depends on what has already been downloaded on that device; first-time offline form loading is not guaranteed. Do not uninstall or clear browser data while Reports are queued. For access, missing templates or an expired invitation, contact the person who invited you.
